***dynaMigs.net* – small business, large data**

***dynaMigs.net* – is made up of four company founders, a great idea and decades of IT expertise. *dynaMigs.net* specialises in the automation of data migrations in complex storage solutions. Based in Gräfelfing near Munich, the company now has twelve permanent employees and a broad network of IT specialists. *dynaMigs.net* has been handling major worldwide IT projects for international enterprises from its headquarters in Munich since 2015.**

As independent IT developers, the four company founders met one another during a large IT project at the beginning of the 2000s. They developed scripts for faster and secure porting of large amounts of data for a well-known storage manufacturer. When the project came to an end, they made the decision to conserve their expertise and further develop it under the umbrella company of *dynaMigs.net*.

"We distinguish ourselves from other service providers through our self-developed toolset, with which we can automate all migration processes and implement these in a tamper-proof manner. This saves our clients time, money and manpower," says Matthias Weidmann, Managing Director and co-founder of *dynaMigs.net*. "Our full-service migration concept includes the analysis of the source system, detail planning, change management, and verification of the migrated data."

The company operates independently of manufacturers and platforms and can work remotely from anywhere in the world, using only the Internet. Clients include leading automotive companies, reinsurance companies and hardware manufacturers. *dynaMigs.net* has been an ISO-9001-certified IT service provider since the spring of 2018.
